

Key Action: Learning Mobility of Individuals  
Action Type: Youth mobility

## Project Title

# Young TREEtment for climate

## Project Coordinator

**Organisation** Youth for Equality  
**Address** Agatova 347 , 925 28 Puste Ulany , Trnavský kraj , SK  
**Website** [www.youthforequality.sk](http://www.youthforequality.sk)

## Project Information

**Identifier** 2019-3-SK02-KA105-002371  
**Start Date** Feb 1, 2020  
**End Date** Dec 31, 2021  
**EC Contribution** 20,400 EUR  
**Partners** SYSTEM & G FINLAND RY (FI) , Conexão Jovem (PT) , STOWARZYSZENIE MŁODYCH ARTYSTÓW ECO POWER (PL) , SINDESMOS SISTIMA KAI GENIA (EL) , Asociace TOM CR, TOM 21105 DUMANCI (CZ) , SISTEMA UN G LATVIJA (LV) , ASSOCIATION FOR ENVIRONMENTAL PROTECTION AND IMPROVEMENT EKO-ZHIVOT KAVADARCI (MK)  
**Topics** Environment and climate change ; Agriculture, forestry and fisheries

## Project Summary

### Objectives

The objectives of our project Young TREEtment for climate is to share ideas of the participants about the issue of forest protection, their importance, the effects of protecting green areas in the cities and nature everywhere and the benefits of sustainable lifestyle. Participants want to become environmentally conscious and active in the area of nature protection. We will use various modern and innovative methods to educate project participants – provide theory but also let them work on exercises individually or in groups, analyse problems, create problem-solution schemes, perform planning exercises. In the workshops, activities they will apply their knowledge on the concrete real-life examples and situations. We will also use the method - learning by doing – activism – planting trees accompanied by forest cleaning.

By implementing the project we want to spread the awareness of forests importance and nature protection in the light of the aggravating climate change. Through young project participants we want to inspire people in their local communities to act more environmentally friendly, sustainably and engage more in nature protection. We also want to reinforce the cooperation among young people from different countries and different backgrounds for a good cause and teach them about the importance of empathy, tolerance, respect and activism for a good cause.

### Activities

The project will engage participants from eight European countries (5 participants per national team). We will recruit the participants who are curious, active, creative, enthusiastic and interested in the environmental topics or who would like to know more about the environmental issues, forests and sustainability. We strongly encourage also the participation of young people with fewer opportunities or from less favourable backgrounds.

As for the activities, in the project's timetable we have proposed a wide range of activities. The project activities will range the activities focusing on knowledge building- as thematic presentations and lectures given by environmental professionals (foresters, environmentalists, journalists covering environmental topics- especially forest issues and climate), then focusing on analysing problems, situations, participating in role-plays and simulations, debates. These activities will culminate in the practical performance of a flash mob and a survey carried out among people (both activities are directed at spreading the project's main messages and environmental awareness) and the creation of national action plans in which the participants will propose the project inspired actions that they will carry out in their local communities. These activities will be complemented by specific learning activities: trees planting, forest cleaning together with guided tour in the High Tatras mountains (with a practical lecture on the issue of forests). We have designed the project Young TREEtment for climate as inspirational, interesting, educational, encouraging and enriching for all its participants, partners and its stakeholders.

### Impact

Participants will strengthen the theoretical and practical knowledge of participants in the area of forests protection and enlargement, environmental activism, climate change and sustainable lifestyle. They will present them the ways of promotion of the "green" solutions to the climate change and show them how to make a difference in the fight against deforestation. They will understand deeply the project core topics and subsequently encourage them to propose real-life solutions and carry them out in their home countries.

They will be inspired to look at various subject matters from different angles, learn how to use modern methods in communication and activism. They will become more active and responsible citizens and we want our participants to extend the positive effects of the Young TREEtment for climate project on their communities back in their

countries. We aim to improve participants' professional capacities through learning how to work in teams, taking the personal initiative, communicating and promoting good cause and seeking the right solutions to important societal threats.

With our project we also want to contribute to positive and meaningful development of the common European programme- Erasmus Plus. Youngsters encourage youngsters to take part in it and turn the opportunities it offers to benefits for not only them but also for their wider surroundings and communities.
